Getting-Started with Terminal Commands on Mac 10.15

Shares

Hi! The Tutorial Shows You in Easy Steps **How-to Quick-Start with the Console/Terminal Command-Line/Shell on Mac 10.15 Catalina BSD/Unix**.

This is Just a 'Quick and Dirty' Introduction to the **Command Line Basic Instructions** on Mac Command Line Console Terminal.

The Tutorial is **Step-by-Step** and You Can Just Getting-Started Following and Executing each Command without any Harm for Your System 🙂

After all only '**Practice Makes the Master**'; so Do Not try to Getting-Started too Hard but Just '**Take it Easy!**' 😉

The Commands are Intended for Execution on the **Bash Shell** but Most should Works also for the Bourne, C, TC and Korn Shells...

2. **Switch to the Bash Shell**
   (Press “Enter” to Execute Commands)

```
bash
```

3. To **List** a Directory Content (Directories and Files included)

```
ls [/path]
```

   For Example to List the Content of the Root Directory:

```
ls /
```

   Or to List the Content of the Home Directory:

```
ls $HOME
```

4. To **Change Directory**

```
cd [/path]
```

   For Example to Go into the Home Directory:

```
cd $HOME
```

5. To **Create** Directories and Files

   To Create a **Directory** do:

```
mkdir [/path]/myDirectory
```

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it. Ok

For Instance:

```
mkdir $HOME/test
```

To Create a **Blank File** do:

```
touch [/path]/myFile
```

For Instance:

```
touch $HOME/test/test
```

6. To **Copy** Directories and Files

Shares

To Copy a **Single File**:

```
cp [/path]/myFile1 [/path]/toTargetDirectory/myEventualNewFileName
```

(After a '\' to Press 'Enter' the Command is Not Executed but instead only a 'Carriage Return' Like in a Typewriter)
To Copy **Multiple Files**:

```
cp [/path]/myFile1 ... [/path]/myFileN \
[/path]/toTargetDirectory/
```

For Instance to Copy a Single **File**:

```
cp $HOME/test/test $HOME/test/hello
```

To Copy a **Single Directory**:

```
cp -r [/path]/myDirectory1 [/path]/toTargetDirectory/myEventualDirectoryName
```

To Copy **Multiple Directories**:

```
cp -r [/path]/myDirectory1 ... [/path]/myDirectoryN \
[/path]/toTargetDirectory/
```

Now for Instance to Copy a Single Directory do:

```
cp -r $HOME/test $HOME/hello
```

7. To **Move** Directories and Files

Moving a **Single File**:

```
mv [/path]/myFile1 [/path]/toTargetDirectory/myEventualNewFileName
```

We use cookies to ensure that we give you the best experience on our website. If you continue to use this site we will assume that you are happy with it. Ok

To Move **Multiple Files**:

```
mv [/path]/myFile1 ... [/path]/myFileN \
[/path]/toTargetDirectory/
```

The Same Command is Valid Also for **Directories**!

Now for Instance to Move a Single File do:

```
mv $HOME/test/test $HOME/hello/hello
```

8. To **Delete** Directories and Files

Shares

To Delete a **File** do:

```
rm [/path]/myFile
```

For Instance:

```
rm $HOME/test/test
```

Removing a **Directory** do:

```
rm -rf [/path]/myDirectory
```

For Instance:

```
rm -rf $HOME/test
```

9. Last **How-to Get the Admin Super-Powers**

To Login as SuperUser:

```
sudo su
```

To Logout from SuperUser:

```
exit
```

(To Protect Your System from the possible Damages of an Hazardous 'Crazy' Command Execution the Logout 'Should' be Executed Every Time a Conscious and Meaningful Series of Commands has been Achieved...)
To Execute a Command as SuperUser:

```
sudo myCommand
```
